# INSTALLATION GUIDE

**Waterworks**  
**PowerUP**

## Step 1

Remove PowerUP from its protective packaging and place on a flat surface. Set this packaging aside as returns by post are only accepted in original packaging.

## Step 2

### Check contents of Quickfixing kit:

- 2 x 30a Maxi Fuses
- 1 x Size 12 Jubilee Clip
- 1 x Size 20 Jubilee Clip
- '8 x Self Tapping Tek Screws'
- 1 x Emergency Winding Handle

## Step 3

Remove the Maxi Fuse from the Fuse Holder prior to installation. Position your PowerUP where required and fix through the quick fit tabs using 4 x self tapping screw provided. If you have HD Hose **Guides** or Security Pulleys, remember to leave room for spooling. **TOP TIP:** Use an 8mm socket in your drill for best results with all self tappers.

### Step 4

Fix your push button in place using the self tapping screw provided. Fix at the back door at a comfortable height.

**TOP TIP:** Use an 8mm socket in your drill for best results with all self tappers.

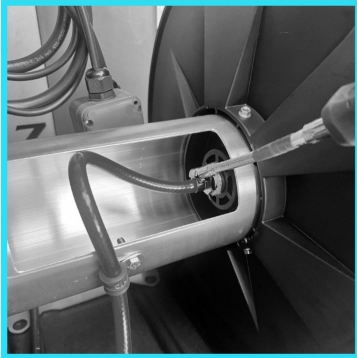

### Step 5

Connect your pump hose to the rotary union using the S26 plug and size 20 Jubilee clip provided.

### Step 6

Connect your delivery hose to the reel by threading it through the P-clip, tightening the P-clip and then fixing to the 6mm brass hose tail with the size 12 jubilee clip provided.

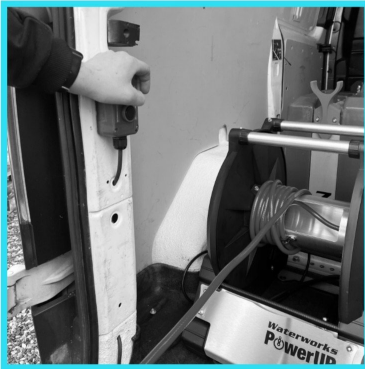

## Step 7

Connect the positive and negative power cables to your existing battery securely and insert the 30 Amp Maxi Fuse provided.

## Step 8

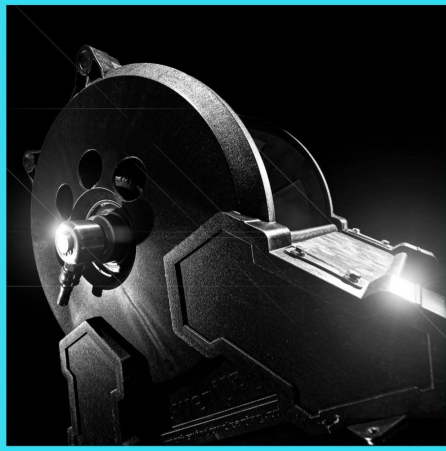

Carefully wind on your hose under power. When using a hose for the first time you may encounter kinks and knots. Take care to avoid knots passing through the spooling hand.

## Step 9

Connect your chosen hose fitting. We recommend Series 21 with a 6mm tail.

Your PowerUP is now ready for work!

**WARNING!**

We have done everything to ensure that this product is safe for our users, however it is the sole responsibility of the user to take care when using any type of powered equipment. Be aware of your surroundings and stay conscious of any kinks or snags.
